

Basic JS Exercise

1. Write a JavaScript function that accepts a list of country names as input and returns the longest country name as output.

Sample function : Longest_Country_Name(["Australia", "Germany", "United States of America"])

Expected output : "United States of America"

2. Write a JavaScript program to get a random element from an array.

Example: [3, 7, 9, 11] => 9

3. Write a JavaScript program to list the properties of a JavaScript object.

Sample object:

```
var student = {  
  name : "David Rayy",  
  sclass : "VI",  
  rollno : 12 };
```

Sample Output: name,sclass,rollno

4. Write a JavaScript function to split a string and convert it into an array of words.

Test Data : "Ram Singh"=>["Ram", "Singh"]

5. Create an object with a property of first_name and last_name. Add your first and last names. Then console log out the full name using the function that accesses the object data in the console
